### INSTRUCTIONS.

APPLANTE AND MINERALS

All applications for apparatus are to be made on Science Form, No. 49, which will be supplied on application to the Secretary, Science and Art Department, South Kensington.

The prices given in the right-hand column are the highest on which the aid of 50 per cent. is given. The applicant is at liberty to select a higher-priced article, but the aid towards the purchase of it will be only 50 per cent. of the price in the right-hand column. Should a lower-priced article be selected the aid will be only to the extent of 50 per cent. of its price. No aid is given on those articles to which no such price is attached.

Apparatus grants are rigorously confined to articles of a permanent and non-destructible nature; hence no aid is afforded in the purchase of breakable articles, such as glass retorts, test tubes, &c., or indeed generally in the purchase of articles to be used by the student as distinguished from those of a permanent and illustrative character which are required by the teacher in giving instruction in science. To such articles no prices are affixed in the right-hand column; the articles are mentioned simply to assist teachers in their selection.

## PREFACE

MINING is but the practical application of several sciences; and some of the Apparatus used for teaching Applied Mechanics, Experimental Physics, and Geology will occasionally be found necessary. Beyond this a difficulty arises in dealing with the practice of the art, which must vary with different localities. Mining Diagrams could generally be prepared from the reports of H.M. Inspector of Mines for the district in which the school or class is situated. The teacher should-make a collection of minerals from his own district; these will often be found more useful than purchased collections.
